

The image shows a vertical wall with significant damage. A large, irregular area of the wall's surface material has been removed, revealing a darker, textured substrate. This damaged area is highlighted by a red dashed circle. A red arrow points from a text box in the lower-left corner to the left edge of this damaged area. The wall is flanked by vertical strips of white, fibrous material, possibly insulation or drywall. In the background, a doorway or opening reveals another room with various items, including what appears to be a computer monitor and some equipment.
